

The Saint Louis University
Center of Excellence in Maternal and Child
Health Education, Science, and Practice
Presents:

**Adverse Pregnancy Outcomes and Multiple Risk
Factors: Findings from a prospective cohort study of
100,000 pregnant women in Wuhan, China.**

PRESENTED
BY DR. QIAN,
PH.D., M.D.

ABOUT DR. QIAN

Dr. Qian is a dedicated maternal and child health epidemiologist with extensive education and training in Medicine, Exposure Assessment, and Epidemiology. Dr. Qian serves as the Department Chair of Epidemiology and Biostatistics at SLU and more recently was named the Director of the SLU MCH CoE.

ABSTRACT

Funded by the Health Effects Institute, the Saint Louis University Maternal and Child Health team evaluated whether or not ambient air pollutants are related to increased rates of preterm birth, low birth weight, and intrauterine growth retardation in neonates. This study followed up approximately 100,000 women and their infants. Using additional data, the team also conducted a nested case-control study of 10,000 women. This study provides an important international scientific context for U.S. studies, enabling assessments of the plausibility of U.S. findings in this field.

JOIN US

**Tuesday, April 26th
at 12pm-1pm**

Registration required.

Please use the link below to register for this event:
