Author Guidelines

Research Article Guidelines

The original research manuscript should not be like a technical journal article. This will not only minimize conflict between professional publications and EURJ but also make it more appealing for the reader. Remember your audience! Your article will be read by mostly undergraduates (as well as scholars from a wide range of academic disciplines) and thus should be readable and comprehensible to anyone interested in the topic, regardless of their expertise. Yet, one should avoid devoting more than a few sentences towards the explanation of standard information that should be known to majority of the academia. Your manuscript should uphold a level of sophistication that represents the standards that Emory University strives to promote. For instance, it is foolish to assume that the majority of academia will have an understanding of what is meant by the phrase “coarse-grain Monte Carlo simulations algorithms for matrix computation.” Such terms need to be clearly elaborated upon so that the pertinent research can be both understood and appreciated.

General Guidelines:

1. Title: The title should, at once, adequately reflect upon the holistic nature of the idea behind the manuscript. The title should not be as generalized as to encompass myriad ideas. At the same time do not scare the reader away. Make the title appropriate yet appealing.

2. Abstract: A clear and concise yet engaging abstract that summarizes the author’s research and conclusions. This section should be between 200-300 words.

3. Introduction: The manuscript should have a general introduction to the main topic of your paper. It should provide the necessary background information in order for the paper to be fully comprehensible. Include the purpose of your research, why it was conducted, and what is important about it.

4. Methods section: Describe the main procedure used to perform your inquiry. Avoid listing out detailed step-by-step experimental procedures, but explain the main methods used and why that particular procedure was used as well as the advantages and disadvantages. This section should convey the general procedure behind the inquiry, yet any innovative techniques should be advertised.

5. Results and Discussion: This section is the most important section of the manuscript; hence, this portion should be the most detailed. Do not focus too much on results; rather take this chance to examine the trends or implications in order to substantiate your conclusions. This is your opportunity to showcase the importance and fascination of your research. Your audience is more interested in the implications of the results and the conclusions you draw from them.

6. Conclusion. This relatively short section should be the closing paragraph of your manuscript. In few sentences, summarize the purpose of the study and the conclusions that you made. Identify the strengths and weaknesses of the inquiry, so as to provide an insight into further studies. Though you already stated the importance of your inquiry in the introduction, here you are stating the importance of your findings and conclusions and their potential affect in your overall field of study.

7. Acknowledgment section: Include any relevant acknowledgments you would like to make.

8. References section: Make sure all references are cited within the manuscript at the end of the document. This section layout must follow EURJ Reference Guidelines. Failure to cite properly is a serious academic violation and will not be tolerated.

9. Please include pertinent illustrations, pictures, and graphs in order to make the article more visually appealing to the reader. Each figure should be labeled with an explanatory caption and must follow EURJ Figure Guidelines.

10. The manuscript should be no more than 3000 words (about 10 typed double-spaced pages). Special exceptions may be granted if there is difficulty in shortening the length. Please contact the Editor-in-Chief to obtain permission if this is a problem.

11. Include page numbers on each page submitted with your full name appearing only on the front page.

12. Complete and sign the Author Agreement form.

13. Submit manuscript via our online system
Short Abstract
A short abstract should consist of the problem investigated, the purpose of the study, methods, major results, interpretation, and implications.
1. The submission should be 500 words.
2. Complete and sign the Author Agreement form.
3. Submit abstract via our online system.

Special Feature Article Guidelines
The Special Features Section serves as a forum for scholarly discussion. The Special Feature Article topics are very broad, where the only restriction is that the article provokes scholarly thought. This may concern an interesting view towards some current/historical event, a philosophical thought, or even a review of scholarly work/research (preferably conducted by Emory faculty/alumni), or anything that is of interest and involves an investigation or a great deal of thought. One interesting topic could be a psychoanalytical juxtaposition of political tyrants from both ancient and modern times, a review of America’s research on alternate energy sources, an insight/survey into why drinking/smoking is so popular in college, or even Wal-Mart’s effect on America. Your sources can come from published work or you might consider doing your own research (for instance, one might conduct surveys around campus or the city of Atlanta). Basically, this is the section to talk about an interesting question in a scholarly fashion.

1. The submission should be between 500-1700 words.
2. Complete and sign the Author Agreement form.
3. Submit manuscript via our online system.

Spotlight Guidelines
This is an informal sub-section included within the Special Features Section to write about your personal account in your pursuit to obtain research experience. Talk about your current research proposal and what you are presently trying to accomplish in your research. Tell your story while providing information and background about your topic. Discuss your interest in this topic and how you found this particular research position. Give any advice to your fellow undergraduates who might be looking for research experience. This section does not require any results or conclusions. This section is ideal for students who have just started their research or do not have any concrete data/results. This area is also suitable for students who wish to publish their research experience in EURJ yet are not able to do so in the original research section due to copyright rules of other professional journals in which they plan on publishing.

1. The submission should be between 500-1700 words
2. Complete and sign the Author Agreement form
3. Submit manuscript via our online system

Author Agreement Form
A completed and signed author agreement form is required when submitting your manuscript. This form is your and your mentor’s consent to publish your manuscript and to make sure that you are aware that many professional publications do not accept manuscripts or results that have been previously published. While EURJ is not a widely distributed journal, it is still advised that you and your mentor check and discuss the specific guidelines of other professional journals that you and your mentor might be interested in. The form will give permission for EURJ to publish your articles while allowing you to retain the copyrights to your work. Thus, EURJ will not be liable for any copyright infringements, plagiarism, or fabrication of data, or any other unethical actions committed by the author. It is strongly recommended that the author obtains the necessary consent of the mentor before producing the manuscript.
